

## IIS Identification Value Sets

The IIS Identification Value Sets document is intended to accompany the [IIS-to-IIS Companion Guide](#) and the Provider-IIS Companion Guide. These documents provide helpful information for HL7 configuration to streamline IZ Gateway testing activities. You can use the following tables for receiving IIS jurisdictions identification values for IIS-IIS and Provider-IIS exchange through the IZ Gateway.

Table 1, titled *IZ Gateway IIS facility identifiers*, includes values used to populate MSH-4 and MSH-6, while Table 2, titled *IZ Gateway application identifiers*, includes values used to populate MSH-3 and MSH-5. Both tables are regularly updated when changes are made to identification values. If you have updated information to share for identifying your jurisdiction, please reach out to [IZgateway@cdc.gov](mailto:IZgateway@cdc.gov).

Table 1: IZ Gateway IIS facility identifier information:

- For IIS-to-IIS exchange, sending jurisdictions will use the identifier values in MSH-4 and MSH-6 to identify IIS jurisdictions.
- For Provider-IIS exchange, sending organizations will use the identifier values in MSH-6 to identify IIS jurisdictions.

Table 1: IZ Gateway IIS facility identifiers

IIS Jurisdiction	Value
Alabama	AL-IIS
Alaska	AKIIS
American Samoa	AS0000
Arizona	ASIIS
Arkansas	AR0000
California	CAIR
California - San Joaquin	RIDE-DE
Colorado	CDPHE
Commonwealth of the Northern Mariana Islands	MP0000
Connecticut	CT0000
